PCT/CH 03/00373

**V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement****1. Statement**

Novelty (N)	Claims	1-7	YES
	Claims		NO
Inventive step (IS)	Claims	1-7	YES
	Claims		NO
Industrial applicability (IA)	Claims	1-7	YES
	Claims		NO

**2. Citations and explanations**

1. US3184874 (D1) is considered to represent the closest prior art in relation to the subject matter of claims 1 and 3.

1.1 D1 discloses (the references in parentheses are to this document) a process for folding a length of textile strip, in particular a length of a label strip, wherein the length of strip (21) is first fed to a supporting member (26), heated in the area that is to be folded, then folded and finally fixed in folded state under the application of pressure and heat.

The subject matter of claim 1 therefore differs from the known process in that the posterior face of the folding area is heated.

The subject matter of claim 1 is therefore novel (PCT Article 33(2)).

1.2 D1 discloses (the references in parentheses are to this document) an arrangement having a heating device (40) situated in front of a folding device to heat the folding area of the length of strip (21).

The subject matter of claim 3 therefore differs from the known arrangement in that the heating device (40) acts on the posterior face of the length of strip.

The subject matter of claim 3 is therefore novel (PCT Article 33(2)).

- 1.3 The heating device described in D1 acts on the anterior face, that is, on the viewing side of the length of strip, which can lead to shiny areas on the viewing side of the length of strip.
- 1.4 Proceeding from the process and the arrangement described in D1, the problem addressed may be considered that of reducing the risk inherent therein that shiny areas may be produced on the viewing side of the length of strip during folding.
- 1.5 The proposed solution is neither known from nor suggested by the available prior art. Consequently, the solution described in claims 1 and 3 involves an inventive step (PCT Article 33(3)).
- 1.6 Dependent claims 2 and 4-7 pertain to developments of independent claims 1 and 3 and therefore likewise meet the requirements of PCT Article 33(1).
2. The embodiment described on page 3, lines 21-22, and claimed in claim 6, according to which the retaining member, not the supporting member, is fitted with a heating device, falls outside the scope of the present independent claims because the heating device acts in this case on the anterior, not the

posterior, face of the length of strip. This inconsistency between the claims and the description leads to doubt concerning the subject matter for which protection is sought and the claims are consequently unclear (PCT Article 6).
